

## SPRING BOOT 5

### Exercise: Boot Basics (IoC, DI, AOP, Logging)

Develop a Spring Boot application with the following design model. Wire the beans with annotations. Develop validation aspect on the lines of AOP. Configure in such way that all the methods in the service classes must validate their input objects.

In the main() method of com.glarimy.spring.bank.console.BankConsole, autowire the Bank bean, open, deposit, withdraw and print the account details.
